

## Anti-KAT2A/GCN5 Picoband Antibody

Catalog # ABO12399

#### Specification

# Anti-KAT2A/GCN5 Picoband Antibody - Product Information

ApplicationWBPrimary AccessionQ92830HostRabbitReactivityHumanClonalityPolyclonalFormatLyophilizedDescriptionRabbit IgG polyclonal antibody for Histone acetyltransferase KAT2A(KAT2A) detection. Tested with WB in Human.

**Reconstitution** Add 0.2ml of distilled water will yield a concentration of 500ug/ml.

### Anti-KAT2A/GCN5 Picoband Antibody - Additional Information

Gene ID 2648

**Other Names** Histone acetyltransferase KAT2A, 2.3.1.48, General control of amino acid synthesis protein 5-like 2, Histone acetyltransferase GCN5, HsGCN5, Lysine acetyltransferase 2A, STAF97, KAT2A, GCN5, GCN5L2, HGCN5

Calculated MW 93926 MW KDa

**Application Details** Western blot, 0.1-0.5 μg/ml, Human<br>

Subcellular Localization Nucleus .

**Tissue Specificity** Expressed in all tissues tested, with most abundant expression in ovary.

Protein Name Histone acetyltransferase KAT2A

**Contents** Each vial contains 5mg BSA, 0.9mg NaCl, 0.2mg Na2HPO4, 0.05mg NaN3.

Immunogen

A synthetic peptide corresponding to a sequence at the N-terminus of human KAT2A/GCN5 (75-106aa DPARPGLSQQQRASQRKAQVRGLPRAKKLEKL), identical to the related mouse and rat sequences.

**Purification** Immunogen affinity purified.

**Cross Reactivity** No cross reactivity with other proteins

Storage

At -20°C for one year. After r°Constitution, at 4°C for one month. It°Can also be aliquotted and stored frozen at -20°C for a longer time.Avoid repeated freezing and thawing.

# Anti-KAT2A/GCN5 Picoband Antibody - Protein Information

Name KAT2A {ECO:0000303|PubMed:27796307, ECO:0000312|HGNC:HGNC:4201}

Function

Protein lysine acyltransferase that can act as a acetyltransferase, glutaryltransferase, succinvitransferase or malonvitransferase, depending on the context (PubMed:<a href="http://www.uniprot.org/citations/29211711" target="\_blank">29211711</a>, PubMed:<a href="http://www.uniprot.org/citations/35995428" target="\_blank">35995428</a>). Acts as a histone lysine succinvltransferase: catalyzes succinvlation of histone H3 on 'Lys-79' (H3K79succ), with a maximum frequency around the transcription start sites of genes (PubMed:<a href="http://www.uniprot.org/citations/29211711" target=" blank">29211711</a>). Succinylation of histones gives a specific tag for epigenetic transcription activation (PubMed:<a href="http://www.uniprot.org/citations/29211711" target=" blank">29211711</a>). Association with the 2-oxoglutarate dehydrogenase complex, which provides succinyl-CoA, is required for histone succinylation (PubMed:<a href="http://www.uniprot.org/citations/29211711" target=" blank">29211711</a>). In different complexes, functions either as an acetyltransferase (HAT) or as a succinyltransferase: in the SAGA and ATAC complexes, acts as a histone acetyltransferase (PubMed:<a href="http://www.uniprot.org/citations/17301242" target=" blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target=" blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/29211711" target=" blank">29211711</a>). Has significant histone acetyltransferase activity with core histones, but not with nucleosome core particles (PubMed: <a href="http://www.uniprot.org/citations/17301242" target="\_blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target="\_blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/21131905" target="\_blank">21131905</a>). Has a a strong preference for acetylation of H3 at 'Lys-9' (H3K9ac) (PubMed:<a href="http://www.uniprot.org/citations/21131905" target=" blank">21131905</a>). Acetvlation of histones gives a specific tag for epigenetic transcription activation (PubMed:<a href="http://www.uniprot.org/citations/17301242" target=" blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target="\_blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/29211711" target=" blank">29211711</a>). Recruited by the XPC complex at promoters, where it specifically mediates acetylation of histone variant H2A.Z.1/H2A.Z, thereby promoting expression of target genes (PubMed:<a href="http://www.uniprot.org/citations/29973595" target=" blank">29973595</a>, PubMed:<a href="http://www.uniprot.org/citations/31527837" target=" blank">31527837</a>). Involved in long-term memory consolidation and synaptic plasticity: acts by promoting expression of a hippocampal gene expression network linked to neuroactive receptor signaling (By similarity). Acts as a positive regulator of T-cell activation: upon TCR stimulation, recruited to the IL2 promoter following interaction with NFATC2 and catalyzes acetylation of histone H3 at 'Lys-9' (H3K9ac), leading to promote IL2 expression (By similarity). Required for growth and differentiation of craniofacial cartilage and bone by regulating acetylation of histone H3 at 'Lys-9' (H3K9ac) (By similarity). Regulates embryonic stem cell (ESC) pluripotency and differentiation (By similarity). Also acetylates non- histone proteins, such as CEBPB, MRE11, PPARGC1A, PLK4 and TBX5

(PubMed:<a href="http://www.uniprot.org/citations/16753578" target="\_blank">16753578</a>, PubMed:<a href="http://www.uniprot.org/citations/17301242" target=" blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/27796307" target="\_blank">27796307</a>, PubMed:<a href="http://www.uniprot.org/citations/29174768" target="\_blank">29174768</a>, PubMed:<a href="http://www.uniprot.org/citations/38128537" target="blank">38128537</a>). Involved in heart and limb development by mediating acetylation of TBX5, acetylation regulating nucleocytoplasmic shuttling of TBX5 (PubMed:<a href="http://www.uniprot.org/citations/29174768" target=" blank">29174768</a>). Acts as a negative regulator of centrosome amplification by mediating acetylation of PLK4 (PubMed: <a href="http://www.uniprot.org/citations/27796307" target="\_blank">27796307</a>). Acts as a negative regulator of gluconeogenesis by mediating acetylation and subsequent inactivation of PPARGC1A (PubMed: <a href="http://www.uniprot.org/citations/16753578" target=" blank">16753578</a>, PubMed:<a href="http://www.uniprot.org/citations/23142079" target=" blank">23142079</a>). Also acts as a histone glutaryltransferase: catalyzes glutarylation of histone H4 on 'Lys-91' (H4K91glu), a mark that destabilizes nucleosomes by promoting dissociation of the H2A-H2B dimers from nucleosomes (PubMed:<a href="http://www.uniprot.org/citations/31542297" target=" blank">31542297</a>).

#### **Cellular Location**

Nucleus. Chromosome Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Note=Mainly localizes to the nucleus (PubMed:27796307). Localizes to sites of DNA damage (PubMed:25593309) Also localizes to centrosomes in late G1 and around the G1/S transition, coinciding with the onset of centriole formation (PubMed:27796307).

**Tissue Location** Expressed in all tissues tested.

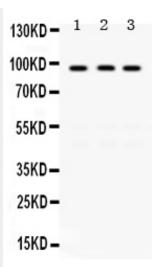

## Anti-KAT2A/GCN5 Picoband Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

# Anti-KAT2A/GCN5 Picoband Antibody - Background

Histone acetyltransferase KAT2A is an enzyme that in humans is encoded by the KAT2AÂ gene. It is mapped to 17q21. KAT2A, or GCN5, GCN5L2, is a histone acetyltransferase (HAT) that functions primarily as a transcriptional activator. The GCN5 protein, a regulator of transcription activation in yeast, promotes maximal levels of transcription by 2 transcriptional activators, GCN4 and the HAP2-HAP3-HAP4 complex. The GCN4 protein activates transcription of a large number of amino acid biosynthetic genes under limiting amino acid conditions and the HAP2-HAP3-HAP4 complex is thought to mediate transcription of genes involved in respiratory functions. GCN5 also functions as a repressor of NF-kappa-B by promoting ubiquitination of the NF-kappa-B subunit RELA in a HAT-independent manner.
