## Goat Anti-NAC1 / BTBD14B Antibody - Protein Information

# Name NACC1

Synonyms BTBD14B, NAC1

#### **Function**

Functions as a transcriptional repressor. Seems to function as a transcriptional corepressor in neuronal cells through recruitment of HDAC3 and HDAC4. Contributes to tumor progression, and tumor cell proliferation and survival. This may be mediated at least in part through repressing transcriptional activity of GADD45GIP1. Required for recruiting the proteasome from the nucleus to the cytoplasm and dendritic spines.

#### **Cellular Location**

Nucleus. Cytoplasm. Note=Distribution in the cytoplasm is dependent on phosphorylation.

#### **Tissue Location**

Overexpressed in several types of carcinomas including ovarian serous carcinomas. Expression levels positively correlate with tumor recurrence in ovarian serous carcinomas, and intense immunoreactivity in primary ovarian tumors predicts early recurrence. Up-regulated in ovarian carcinomas after chemotherapy, suggesting a role in development of chemotherapy resistance in ovarian cancer.
