

Goat Anti-PAX6 (internal) Antibody
Peptide-affinity purified goat antibody
Catalog # AF1793a**Specification**

Goat Anti-PAX6 (internal) Antibody - Product Information

Application	WB, E
Primary Accession	P26367
Other Accession	NP_001595 , 5080 , 18508 (mouse) , 25509 (rat)
Reactivity	Mouse
Predicted	Human, Rat
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	46683

Goat Anti-PAX6 (internal) Antibody - Additional Information**Gene ID** 5080**Other Names**

Paired box protein Pax-6, Aniridia type II protein, Oculorhombin, PAX6, AN2

Dilution

WB~~1:1000

E~~N/A

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-PAX6 (internal) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-PAX6 (internal) Antibody - Protein Information**Name** PAX6**Synonyms** AN2**Function**

Transcription factor with important functions in the development of the eye, nose, central nervous system and pancreas. Required for the differentiation of pancreatic islet alpha cells (By similarity). Competes with PAX4 in binding to a common element in the glucagon, insulin and somatostatin promoters. Regulates specification of the ventral neuron subtypes by establishing the correct progenitor domains (By similarity). Acts as a transcriptional repressor of NFATC1- mediated gene expression (By similarity).

Cellular Location

Nucleus {ECO:0000250|UniProtKB:P63015}. [Isoform 5a]: Nucleus {ECO:0000250|UniProtKB:P63016}

Tissue Location

[Isoform 1]: Expressed in lymphoblasts.

Goat Anti-PAX6 (internal) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Goat Anti-PAX6 (internal) Antibody - Images

AF1793a (0.5 µg/ml) staining of Mouse Eye lysate (35 µg protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.

EB07772 (0.3 μ g/ml) staining of U251 (A), (0.03 μ g/ml) nuclear K562 (B) and (1 μ g/ml) nuclear HeLa (C) cell lysate (35 μ g protein in RIPA buffer). Detected by chemiluminescence.

.EB07772 (0.5 μ g/ml) staining of RAW264.7 cell lysate (35 μ g protein in RIPA buffer). Detected by chemiluminescence.

EB07772 Flow cytometric analysis of paraformaldehyde fixed U251 cells (blue line), permeabilized with 0.5% Triton. Primary incubation 1hr (10ug/ml) followed by Alexa Fluor 488 secondary antibody (1ug/ml). IgG control: Unimmunized goat IgG (black line) followed by Alexa Fluor 488 secondary antibody.

Goat Anti-PAX6 (internal) Antibody - Background

This gene encodes paired box gene 6, one of many human homologs of the *Drosophila melanogaster* gene *prd*. In addition to the hallmark feature of this gene family, a conserved paired box domain, the encoded protein also contains a homeo box domain. Both domains are known to bind DNA, and function as regulators of gene transcription. This gene is expressed in the developing nervous system, and in developing eyes. Mutations in this gene are known to cause ocular disorders such as aniridia and Peter's anomaly. Alternatively spliced transcript variants encoding either the same or different isoform have been found for this gene.
