

Goat Anti-PAX8 (internal) Antibody

Peptide-affinity purified goat antibody Catalog # AF1794a

Specification

Goat Anti-PAX8 (internal) Antibody - Product Information

Application WB, E
Primary Accession O06710

Other Accession NP_054698, 7849

Reactivity
Host
Clonality
Concentration
Isotype
Human
Goat
Polyclonal
100ug/200ul
IgG

Isotype IgG
Calculated MW 48218

Goat Anti-PAX8 (internal) Antibody - Additional Information

Gene ID 7849

Other Names

Paired box protein Pax-8, PAX8

Dilution

WB~~1:1000

E~~N/A

Format

0.5~mg lgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-PAX8 (internal) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-PAX8 (internal) Antibody - Protein Information

Name PAX8

Function

Transcription factor for the thyroid-specific expression of the genes exclusively expressed in the thyroid cell type, maintaining the functional differentiation of such cells.

Cellular Location Nucleus.

Tissue Location

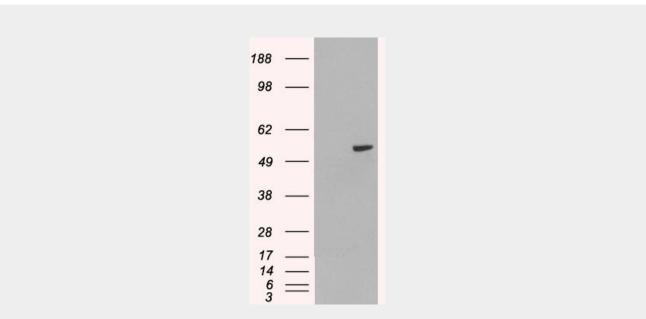

Expressed in the excretory system, thyroid gland and Wilms tumors

Goat Anti-PAX8 (internal) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Goat Anti-PAX8 (internal) Antibody - Images

HEK293 overexpressing PAX8A (RC200651) and probed with AF1794a (mock transfection in first lane), tested by Origene.

Goat Anti-PAX8 (internal) Antibody - Background

This gene encodes a member of the paired box (PAX) family of transcription factors. Members of this gene family typically encode proteins that contain a paired box domain, an octapeptide, and a paired-type homeodomain. This nuclear protein is involved in thyroid follicular cell development and expression of thyroid-specific genes. Mutations in this gene have been associated with thyroid dysgenesis, thyroid follicular carcinomas and atypical follicular thyroid adenomas. Alternatively spliced transcript variants encoding different isoforms have been described.
