KO-Validated Anti-HADH Mouse Monoclonal Antibody - Protein Information

Name HADH

Function

Mitochondrial fatty acid beta-oxidation enzyme that catalyzes the third step of the beta-oxidation cycle for medium and short-chain 3-hydroxy fatty acyl-CoAs (C4 to C10) (PubMed:10231530, PubMed:11489939, PubMed:16725361). Plays a role in the control of insulin secretion by inhibiting the activation of glutamate dehydrogenase 1 (GLUD1), an enzyme that has an important role in regulating amino acid-induced insulin secretion

(By similarity). Plays a role in the maintenance of normal spermatogenesis through the reduction of fatty acid accumulation in the testes (By similarity).

Cellular LocationMitochondrion matrix

Tissue Location

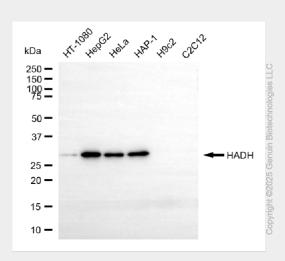

Expressed in liver, kidney, pancreas, heart and skeletal muscle.

Western blotting analysis using anti-HADH antibody (Cat#AGI2425). HADH expression in wild type (WT) and HADH knockout (KO) HeLa cells with 20 μg of total cell lysates. Hsp90 α serves as a loading control. The blot was incubated with anti-HADH antibody (Cat#AGI2425, 1:2,000) and HRP-conjugated goat anti-mouse secondary antibody respectively.
