GPR52 Antibody (Cytoplasmic Domain) - Protein Information**Name** GPR52 {ECO:0000303|PubMed:9931487, ECO:0000312|HGNC:HGNC:4508}**Function**

Gs-coupled receptor activated by antipsychotics reserpine leading to an increase in intracellular cAMP and its internalization (PubMed:24587241). May play a role in locomotor activity through modulation of dopamine, NMDA and ADORA2A-induced locomotor activity. These behavioral changes are accompanied by modulation of the dopamine receptor signaling pathway in striatum (PubMed:24587241). Modulates HTT level via cAMP-dependent but PKA independent mechanisms through activation of RAB39B that translocates HTT to the endoplasmic reticulum, thus avoiding proteasome degradation (PubMed:25738228).

Cellular Location

Cell membrane; Multi-pass membrane protein.

Tissue Location

Expressed in brain, especially in striatum.

Volume

50 µl
