VWF Antibody - Protein Information

Name VWF

Synonyms F8VWF

Function Important in the maintenance of hemostasis, it promotes adhesion of platelets to the

sites of vascular injury by forming a molecular bridge between sub-endothelial collagen matrix and platelet- surface receptor complex GPIb-IX-V. Also acts as a chaperone for coagulation factor VIII, delivering it to the site of injury, stabilizing its heterodimeric structure and protecting it from premature clearance from plasma.

Cellular Location
Secreted. Secreted, extracellular space, extracellular matrix. Note=Localized to storage granules

Tissue Location
Plasma.

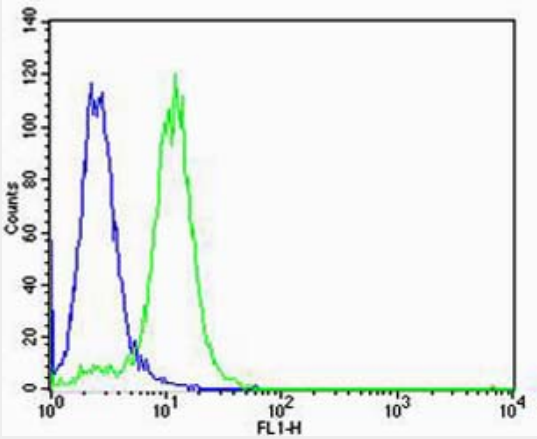
Immunohistochemical analysis of paraffin-embedded H. kidney section using VWF(Cat#AM8430b). AM8430b was diluted at 1:25 dilution. A peroxidase-conjugated goat anti-mouse IgG at 1:400 dilution was used as the secondary antibody, followed by DAB staining.



Flow cytometric analysis of K562 cells using VWF(green, Cat#AM8430b) compared to an isotype control of mouse IgG1(blue). AP20600c was diluted at 1:100 dilution. An Alexa Fluor® 488 goat anti-mouse IgG at 1:400 dilution was used as the secondary antibody.
