

Anti-Synaptotagmin (Thr202) Antibody

Our Anti-Synaptotagmin (Thr202) rabbit polyclonal phosphospecific primary antibody from PhosphoSolut Catalog # AN1570

Specification

Anti-Synaptotagmin (Thr202) Antibody - Product Information

Application	WB
Primary Accession	<u>P21707</u>
Reactivity	Bovine
Host	Rabbit
Clonality	Polycional
Isotype	lgG
Calculated MW	47399

Anti-Synaptotagmin (Thr202) Antibody - Additional Information

Gene ID 25716 Other Names DKFZp781D2042 antibody, FLJ42519 antibody, P65 antibody, SVP65 antibody, synaptotagmin 1 antibody, Synaptotagmin I antibody, SYT antibody, SYT1 antibody, SytI antibody

Target/Specificity

Synaptotagmin is widely regarded as the primary calcium sensor for synaptic vesicle exocytosis (Fernandez-Chacon et al., 2001; Wang et al., 2003). Moreover, recent studies indicate that the protein also plays a key role in endocytosis (Poskanzer et al., 2003). Synaptotagmin can be phosphorylated by multiple protein kinases and this may play a key role in modulation of synaptotagmin's ability to influence both the exocytotic and endocytotic components of synaptic transmission (Hilfiker et al., 1999; Lee et al., 2004).

Dilution WB~~1:1000

Format

Antigen Affinity Purified from Pooled Serum

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Anti-Synaptotagmin (Thr202) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping Blue Ice

Anti-Synaptotagmin (Thr202) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Anti-Synaptotagmin (Thr202) Antibody - Images

Immunostaining of 14 DIV rat cortical neurons labeling synaptotagmin when phosphorylated at Thr202 (cat. p1570-202, 1:400, red) and PSD95 (green). The cortical neurons were fixed with methanol at -20C for 10 minutes. Photo courtesy of Gang Liu.

Western blot of rat cortical lysate showing specific immunolabeling of the ~62 kDa synaptotagmin phosphorylated at Thr202 in the first lane (-). Phosphospecificity is shown in the second lane (+) where the immunolabeling is completely eliminated by blot treatment with lambda phosphatase (λ -Ptase, 1200 units for 30 minutes).

Anti-Synaptotagmin (Thr202) Antibody - Background

Synaptotagmin is widely regarded as the primary calcium sensor for synaptic vesicle exocytosis (Fernandez-Chacon et al., 2001; Wang et al., 2003). Moreover, recent studies indicate that the protein also plays a key role in endocytosis (Poskanzer et al., 2003). Synaptotagmin can be phosphorylated by multiple protein kinases and this may play a key role in modulation of synaptotagmin's ability to influence both the exocytotic and endocytotic components of synaptic transmission (Hilfiker et al., 1999; Lee et al., 2004).
