GPX3 Antibody (Center) (Cat. #AP11221c) western blot analysis in mouse kidney tissue lysates (35ug/lane). This demonstrates the GPX3 antibody detected the GPX3 protein (arrow).

Western blot analysis of lysates from human kidney, plasma, mouse kidney, plasma and rat kidney tissue lysate (from left to right), using GPX3 Antibody (Center) (Cat. #AP11221c). AP11221c was diluted at 1:1000 at each lane. A goat anti-rabbit IgG H&L (HRP) at 1:5000 dilution was used as the secondary antibody. Lysates at 35ug per lane.

**GPX3 Antibody (Center) - Background**

This gene product belongs to the glutathione peroxidase family, which functions in the detoxification of hydrogen peroxide. It contains a selenocysteine (Sec) residue at its active site. The selenocysteine is encoded by the UGA codon, which normally signals translation termination. The 3' UTR of Sec-containing genes have a common stem-loop structure, the sec insertion sequence (SECIS), which is necessary for the recognition of UGA as a Sec codon rather than as a stop signal.
