

**PTEN Antibody (C-term)**  
**Affinity Purified Rabbit Polyclonal Antibody (Pab)**  
**Catalog # AP13310b**

**Specification**

---

**PTEN Antibody (C-term) - Product Information**

Application	IHC-P, IF, WB,E
Primary Accession	<a href="#">P60484</a>
Other Accession	<a href="#">Q9PUT6</a> , <a href="#">O08586</a> , <a href="#">NP_000305.3</a> , <a href="#">O54857</a>
Reactivity	Human
Predicted	Mouse, Rat, Xenopus
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	47166
Antigen Region	306-335

**PTEN Antibody (C-term) - Additional Information**

**Gene ID** 5728

**Other Names**

Phosphatidylinositol 3, 5-trisphosphate 3-phosphatase and dual-specificity protein phosphatase PTEN, Mutated in multiple advanced cancers 1, Phosphatase and tensin homolog, PTEN, MMAC1, TEP1

**Target/Specificity**

This PTEN antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 306-335 amino acids from the C-terminal region of human PTEN.

**Dilution**

IHC-P~~1:10~50

IF~~1:10~50

WB~~1:1000

E~~Use at an assay dependent concentration.

**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

**Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

PTEN Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

**PTEN Antibody (C-term) - Protein Information**

**Name** PTEN**Synonyms** MMAC1, TEP1

**Function** Dual-specificity protein phosphatase, dephosphorylating tyrosine-, serine- and threonine-phosphorylated proteins (PubMed:[9187108](#), PubMed:[9256433](#), PubMed:[9616126](#)). Also functions as a lipid phosphatase, removing the phosphate in the D3 position of the inositol ring of PtdIns(3,4,5)P3/phosphatidylinositol 3,4,5- trisphosphate, PtdIns(3,4)P2/phosphatidylinositol 3,4-diphosphate and PtdIns3P/phosphatidylinositol 3-phosphate with a preference for PtdIns(3,4,5)P3 (PubMed:[16824732](#), PubMed:[26504226](#), PubMed:[9593664](#), PubMed:[9811831](#)). Furthermore, this enzyme can also act as a cytosolic inositol 3-phosphatase acting on Ins(1,3,4,5,6)P5/inositol 1,3,4,5,6 pentakisphosphate and possibly Ins(1,3,4,5)P4/1D-myo-inositol 1,3,4,5- tetrakisphosphate (PubMed:[11418101](#), PubMed:[15979280](#)). Antagonizes the PI3K-AKT/PKB signaling pathway by dephosphorylating phosphoinositides and thereby modulating cell cycle progression and cell survival (PubMed:[31492966](#), PubMed:[37279284](#)). The unphosphorylated form cooperates with MAGI2 to suppress AKT1 activation (PubMed:[11707428](#)). In motile cells, suppresses the formation of lateral pseudopods and thereby promotes cell polarization and directed movement (PubMed:[22279049](#)). Dephosphorylates tyrosine-phosphorylated focal adhesion kinase and inhibits cell migration and integrin-mediated cell spreading and focal adhesion formation (PubMed:[22279049](#)). Required for growth factor-induced epithelial cell migration; growth factor stimulation induces PTEN phosphorylation which changes its binding preference from the p85 regulatory subunit of the PI3K kinase complex to DLC1 and results in translocation of the PTEN-DLC1 complex to the posterior of migrating cells to promote RHOA activation (PubMed:[26166433](#)). Meanwhile, TNS3 switches binding preference from DLC1 to p85 and the TNS3-p85 complex translocates to the leading edge of migrating cells to activate RAC1 activation (PubMed:[26166433](#)). Plays a role as a key modulator of the AKT-mTOR signaling pathway controlling the tempo of the process of newborn neurons integration during adult neurogenesis, including correct neuron positioning, dendritic development and synapse formation (By similarity). Involved in the regulation of synaptic function in excitatory hippocampal synapses. Recruited to the postsynaptic membrane upon NMDA receptor activation, is required for the modulation of synaptic activity during plasticity. Enhancement of lipid phosphatase activity is able to drive depression of AMPA receptor-mediated synaptic responses, activity required for NMDA receptor-dependent long-term depression (LTD) (By similarity). May be a negative regulator of insulin signaling and glucose metabolism in adipose tissue. The nuclear monoubiquitinated form possesses greater apoptotic potential, whereas the cytoplasmic nonubiquitinated form induces less tumor suppressive ability (PubMed:[10468583](#), PubMed:[18716620](#)).

**Cellular Location**

Cytoplasm. Nucleus. Nucleus, PML body. Cell projection, dendritic spine {ECO:0000250|UniProtKB:O54857}. Postsynaptic density {ECO:0000250|UniProtKB:O54857}. Note=Monoubiquitinated form is nuclear Nonubiquitinated form is cytoplasmic. Colocalized with PML and USP7 in PML nuclear bodies (PubMed:[18716620](#)). XIAP/BIRC4 promotes its nuclear localization (PubMed:[19473982](#)). Associates with the postsynaptic density in response to NMDAR activation (By similarity) {ECO:0000250|UniProtKB:O54857, ECO:0000269|PubMed:[18716620](#), ECO:0000269|PubMed:[19473982](#)}

**Tissue Location**

Expressed at a relatively high level in all adult tissues, including heart, brain, placenta, lung, liver, muscle, kidney and pancreas.

**PTEN Antibody (C-term) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

#### PTEN Antibody (C-term) - Images

Confocal immunofluorescent analysis of PTEN Antibody (C-term) (Cat. #AP13310b) with 293 cell followed by Alexa Fluor® 488-conjugated goat anti-rabbit IgG (green). DAPI was used to stain the cell nuclear (blue).

PTEN Antibody (C-term) (Cat. #AP13310b) western blot analysis in K562 cell line lysates (35ug/lane). This demonstrates the PTEN antibody detected the PTEN protein (arrow).

PTEN Antibody (C-term) (Cat. #AP13310b) immunohistochemistry analysis in formalin fixed and paraffin embedded human liver tissue followed by peroxidase conjugation of the secondary antibody and DAB staining. This data demonstrates the use of PTEN Antibody (C-term) for immunohistochemistry. Clinical relevance has not been evaluated.

#### **PTEN Antibody (C-term) - Background**

This gene was identified as a tumor suppressor that is mutated in a large number of cancers at high frequency. The protein encoded this gene is a phosphatidylinositol-3,4,5-trisphosphate 3-phosphatase. It contains a tensin like domain as well as a catalytic domain similar to that of the dual specificity protein tyrosine phosphatases. Unlike most of the protein tyrosine phosphatases, this protein preferentially dephosphorylates phosphoinositide substrates. It negatively regulates intracellular levels of phosphatidylinositol-3,4,5-trisphosphate in cells and functions as a tumor suppressor by negatively regulating AKT/PKB signaling pathway.
