

PPP1CC Antibody (C-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP16979b

Specification

PPP1CC Antibody (C-term) - Product Information

Application	WB,E
Primary Accession	P36873
Other Accession	P63088 , P63087 , P61287 , NP_002701.1
Reactivity	Human
Predicted	Bovine, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	36984
Antigen Region	281-309

PPP1CC Antibody (C-term) - Additional Information

Gene ID 5501

Other Names

Serine/threonine-protein phosphatase PP1-gamma catalytic subunit, PP-1G, Protein phosphatase 1C catalytic subunit, PPP1CC

Target/Specificity

This PPP1CC antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 281-309 amino acids from the C-terminal region of human PPP1CC.

Dilution

WB~~1:1000

E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

PPP1CC Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

PPP1CC Antibody (C-term) - Protein Information

Name PPP1CC

Function Protein phosphatase that associates with over 200 regulatory proteins to form highly specific holoenzymes which dephosphorylate hundreds of biological targets (PubMed:[17936702](#), PubMed:[25012651](#)). Protein phosphatase 1 (PP1) is essential for cell division, and participates in the regulation of glycogen metabolism, muscle contractility and protein synthesis. Dephosphorylates RPS6KB1 (PubMed:[17936702](#)). Involved in regulation of ionic conductances and long-term synaptic plasticity. May play an important role in dephosphorylating substrates such as the postsynaptic density-associated Ca(2+)/calmodulin dependent protein kinase II. Component of the PTW/PP1 phosphatase complex, which plays a role in the control of chromatin structure and cell cycle progression during the transition from mitosis into interphase (PubMed:[20516061](#)). In balance with CSNK1D and CSNK1E, determines the circadian period length, through the regulation of the speed and rhythmicity of PER1 and PER2 phosphorylation (PubMed:[21712997](#)). May dephosphorylate CSNK1D and CSNK1E (By similarity). Regulates the recruitment of the SKA complex to kinetochores (PubMed:[28982702](#)). Dephosphorylates the 'Ser-418' residue of FOXP3 in regulatory T-cells (Treg) from patients with rheumatoid arthritis, thereby inactivating FOXP3 and rendering Treg cells functionally defective (PubMed:[23396208](#)). Together with PPP1CA (PP1- alpha subunit), dephosphorylates IFIH1/MDA5 and RIG-I leading to their activation and a functional innate immune response (PubMed:[23499489](#)). Core component of the SHOC2-MRAS-PP1c (SMP) holophosphatase complex that regulates the MAPK pathway activation (PubMed:[35768504](#), PubMed:[35831509](#)). The SMP complex specifically dephosphorylates the inhibitory phosphorylation at 'Ser-259' of RAF1 kinase, 'Ser-365' of BRAF kinase and 'Ser-214' of ARAF kinase, stimulating their kinase activities (PubMed:[35768504](#), PubMed:[35831509](#)). Dephosphorylates MKI67 at the onset of anaphase (PubMed:[25012651](#)). The SMP complex enhances the dephosphorylation activity and substrate specificity of PP1c (PubMed:[35768504](#), PubMed:[35831509](#)).

Cellular Location

Cytoplasm. Nucleus. Nucleus, nucleolus. Nucleus, nucleoplasm. Nucleus speckle. Chromosome, centromere, kinetochore. Cleavage furrow. Midbody Mitochondrion. Cytoplasm, cytoskeleton, microtubule organizing center Note=Colocalizes with SPZ1 in the nucleus (By similarity). Colocalizes with URI1 at mitochondrion (PubMed:[17936702](#)). Rapidly exchanges between the nucleolar, nucleoplasmic and cytoplasmic compartments (PubMed:[11739654](#)). Highly mobile in cells and can be relocalized through interaction with targeting subunits (PubMed:[17965019](#)). In the presence of PPP1R8 relocalizes from the nucleolus to nuclear speckles (PubMed:[11739654](#)). Shows a dynamic targeting to specific sites throughout the cell cycle (PubMed:[12529430](#)). Highly concentrated in nucleoli of interphase cells and localizes at kinetochores early in mitosis (PubMed:[12529430](#)). Relocalization to chromosome-containing regions occurs at the transition from early to late anaphase (PubMed:[12529430](#)). Also accumulates at the cleavage furrow and midbody by telophase (PubMed:[12529430](#)). Colocalizes with DYNLT4 in the microtubule organizing center (MTOC) (PubMed:[23789093](#)) {ECO:0000250|UniProtKB:P63087, ECO:0000269|PubMed:[11739654](#), ECO:0000269|PubMed:[12529430](#), ECO:0000269|PubMed:[17936702](#), ECO:0000269|PubMed:[17965019](#), ECO:0000269|PubMed:[23789093](#)}

PPP1CC Antibody (C-term) - Images

PPP1CC Antibody (C-term) (Cat. #AP16979b) western blot analysis in WiDr cell line lysates (35ug/lane). This demonstrates the PPP1CC antibody detected the PPP1CC protein (arrow).

Western blot analysis of PPP1CC (arrow) using rabbit polyclonal PPP1CC Antibody (C-term) (Cat. #AP16979b). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected (Lane 2) with the PPP1CC gene.

PPP1CC Antibody (C-term) - Background

Protein phosphatase 1 (PP1) is essential for cell division, and participates in the regulation of glycogen metabolism, muscle contractility and protein synthesis. Involved in regulation of ionic conductances and long-term synaptic plasticity. May play an important role in dephosphorylating substrates such as the postsynaptic density-associated Ca(2+)/calmodulin dependent protein kinase II.
