

EDA2R Antibody (C-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP18402b**Specification**

EDA2R Antibody (C-term) - Product Information

Application	WB,E
Primary Accession	O9HAV5
Other Accession	NP_068555.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	32759
Antigen Region	267-297

EDA2R Antibody (C-term) - Additional Information**Gene ID** 60401**Other Names**

Tumor necrosis factor receptor superfamily member 27, X-linked ectodysplasin-A2 receptor, EDA-A2 receptor, EDA2R, TNFRSF27, XEDAR

Target/Specificity

This EDA2R antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 267-297 amino acids from the C-terminal region of human EDA2R.

Dilution

WB~~1:1000

E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

EDA2R Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

EDA2R Antibody (C-term) - Protein Information**Name** EDA2R

Synonyms TNFRSF27, XEDAR

Function Receptor for EDA isoform A2, but not for EDA isoform A1. Mediates the activation of the NF-kappa-B and JNK pathways. Activation seems to be mediated by binding to TRAF3 and TRAF6.

Cellular Location

Membrane; Single-pass type III membrane protein.

EDA2R Antibody (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

EDA2R Antibody (C-term) - Images

EDA2R Antibody (C-term) (Cat. #AP18402b) western blot analysis in HepG2 cell line lysates (35ug/lane). This demonstrates the EDA2R Antibody detected the EDA2R protein (arrow).

EDA2R Antibody (C-term) - Background

EDA-A1 and EDA-A2 are two isoforms of ectodysplasin that are encoded by the anhidrotic ectodermal dysplasia (EDA) gene. Mutations in EDA give rise to a clinical syndrome characterized by loss of hair, sweat glands, and teeth. The protein encoded by this gene specifically binds to EDA-A2 isoform. This protein is a type III transmembrane protein of the TNFR (tumor necrosis factor receptor) superfamily, and contains 3 cysteine-rich repeats and a single transmembrane domain but lacks an N-terminal signal peptide. Multiple alternatively spliced transcript variants have been found for this gene, but some variants lack sufficient support. [provided by RefSeq].
