Precautions

PFDN4 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

PFDN4 Antibody (N-term) - Protein Information

Name PFDN4

Synonyms PFD4

Function Binds specifically to cytosolic chaperonin (c-CPN) and transfers target proteins to it. Binds to nascent polypeptide chain and promotes folding in an environment in which there are many competing pathways for nonnative proteins.

PFDN4 Antibody (N-term) - Background

This gene encodes a member of the prefoldin beta subunit family. The encoded protein is one of six subunits of prefoldin, a molecular chaperone complex that binds and stabilizes newly synthesized polypeptides, thereby allowing them to fold correctly. The complex, consisting of two alpha and four beta subunits, forms a double beta barrel assembly with six protruding coiled-coils.
