

## Anti-PKA C alpha/beta Antibody

**Catalog # AP53698** 

# **Specification**

# Anti-PKA C alpha/beta Antibody - Product Information

Application WB, IF, IHC
Primary Accession P17612
Other Accession P22694

Reactivity Human, Mouse, Rat

Host Rabbit Clonality Polyclonal Calculated MW 40590

### Anti-PKA C alpha/beta Antibody - Additional Information

#### **Gene ID 5566**

#### **Other Names**

PRKACA; PKACA; cAMP-dependent protein kinase catalytic subunit alpha; PKA C-alpha; PRKACB; cAMP-dependent protein kinase catalytic subunit beta; PKA C-beta

### **Target/Specificity**

Recognizes endogenous levels of PKA C alpha/beta protein.

## **Dilution**

WB~~1/500 - 1/1000 IF~~1/50 - 1/200 IHC~~1:100~500

#### **Format**

Liquid in 0.42% Potassium phosphate, 0.87% Sodium chloride, pH 7.3, 30% glycerol, and 0.09% (W/V) sodium azide.

## **Storage**

Store at -20 °C. Stable for 12 months from date of receipt

## Anti-PKA C alpha/beta Antibody - Protein Information

### Name PRKACA

#### **Synonyms PKACA**

#### **Function**

Phosphorylates a large number of substrates in the cytoplasm and the nucleus (PubMed:<a href="http://www.uniprot.org/citations/15642694" target="\_blank">15642694</a>, PubMed:<a href="http://www.uniprot.org/citations/15905176" target="\_blank">15905176</a>, PubMed:<a href="http://www.uniprot.org/citations/16387847" target="\_blank">16387847</a>, PubMed:<a href="http://www.uniprot.org/citations/173333334" target="\_blank">173333334</a>, PubMed:<a

href="http://www.uniprot.org/citations/17565987" target=" blank">17565987</a>, PubMed:<a href="http://www.uniprot.org/citations/17693412" target="blank">17693412</a>, PubMed:<a href="http://www.uniprot.org/citations/18836454" target="\_blank">18836454</a>, PubMed:<a href="http://www.uniprot.org/citations/19949837" target="\_blank">19949837</a>, PubMed:<a href="http://www.uniprot.org/citations/20356841" target="blank">20356841</a>, PubMed:<a href="http://www.uniprot.org/citations/21085490" target="blank">21085490</a>, PubMed:<a href="http://www.uniprot.org/citations/21514275" target=" blank">21514275</a>, PubMed:<a href="http://www.uniprot.org/citations/21812984" target="blank">21812984</a>, PubMed:<a href="http://www.uniprot.org/citations/31112131" target="\_blank">31112131</a>). Phosphorylates CDC25B, ABL1, NFKB1, CLDN3, PSMC5/RPT6, PJA2, RYR2, RORA, SOX9 and VASP (PubMed:<a href="http://www.uniprot.org/citations/15642694" target=" blank">15642694</a>, PubMed: <a href="http://www.uniprot.org/citations/15905176" target="blank">15905176</a>, PubMed: <a href="http://www.uniprot.org/citations/16387847" target="blank">16387847</a>, PubMed: <a href="http://www.uniprot.org/citations/17333334" target="blank">17333334</a>, PubMed:<a href="http://www.uniprot.org/citations/17565987" target="\_blank">17565987</a>, PubMed:<a href="http://www.uniprot.org/citations/17693412" target="\_blank">17693412</a>, PubMed: <a href="http://www.uniprot.org/citations/18836454" target="blank">18836454</a>, PubMed:<a href="http://www.uniprot.org/citations/19949837" target="\_blank">19949837</a>, PubMed:<a href="http://www.uniprot.org/citations/20356841" target="blank">20356841</a>, PubMed:<a href="http://www.uniprot.org/citations/21085490" target=" blank">21085490</a>, PubMed: <a href="http://www.uniprot.org/citations/21514275" target="blank">21514275</a>, PubMed: <a href="http://www.uniprot.org/citations/21812984" target="blank">21812984</a>). Regulates the abundance of compartmentalized pools of its regulatory subunits through phosphorylation of PIA2 which binds and ubiquitinates these subunits, leading to their subsequent proteolysis (PubMed:<a href="http://www.uniprot.org/citations/21423175" target=" blank">21423175</a>). RORA is activated by phosphorylation (PubMed:<a href="http://www.uniprot.org/citations/21514275" target=" blank">21514275</a>). Required for glucose- mediated adipogenic differentiation increase and osteogenic differentiation inhibition from osteoblasts (PubMed: <a href="http://www.uniprot.org/citations/19949837" target=" blank">19949837</a>). Involved in chondrogenesis by mediating phosphorylation of SOX9 (By similarity). Involved in the regulation of platelets in response to thrombin and collagen; maintains circulating platelets in a resting state by phosphorylating proteins in numerous platelet inhibitory pathways when in complex with NF-kappa-B (NFKB1 and NFKB2) and I-kappa-B-alpha (NFKBIA), but thrombin and collagen disrupt these complexes and free active PRKACA stimulates platelets and leads to platelet aggregation by phosphorylating VASP (PubMed: <a href="http://www.uniprot.org/citations/15642694" target=" blank">15642694</a>, PubMed:<a href="http://www.uniprot.org/citations/20356841" target="blank">20356841</a>). Prevents the antiproliferative and anti-invasive effects of alpha- difluoromethylornithine in breast cancer cells when activated (PubMed:<a href="http://www.uniprot.org/citations/17333334" target=" blank">17333334</a>). RYR2 channel activity is potentiated by phosphorylation in presence of luminal Ca(2+), leading to reduced amplitude and increased frequency of store overload-induced Ca(2+) release (SOICR) characterized by an increased rate of Ca(2+) release and propagation velocity of spontaneous Ca(2+) waves, despite reduced wave amplitude and resting cytosolic Ca(2+) (PubMed:<a href="http://www.uniprot.org/citations/17693412" target=" blank">17693412</a>). PSMC5/RPT6 activation by phosphorylation stimulates proteasome (PubMed:<a href="http://www.uniprot.org/citations/17565987" target=" blank">17565987</a>). Negatively regulates tight junctions (TJs) in ovarian cancer cells via CLDN3 phosphorylation (PubMed:<a href="http://www.uniprot.org/citations/15905176" target=" blank">15905176</a>). NFKB1 phosphorylation promotes NF-kappa-B p50-p50 DNA binding (PubMed:<a href="http://www.uniprot.org/citations/15642694" target=" blank">15642694</a>). Required for phosphorylation of GLI transcription factors which inhibits them and prevents transcriptional activation of Hedgehog signaling pathway target genes (By similarity). GLI transcription factor phosphorylation is inhibited by interaction of PRKACA with SMO which sequesters PRKACA at the cell membrane (By similarity). Involved in embryonic development by down-regulating the Hedgehog (Hh) signaling pathway that determines embryo pattern formation and morphogenesis most probably through the regulation of OFD1 in ciliogenesis (PubMed: <a href="http://www.uniprot.org/citations/33934390"

target="\_blank">33934390</a>). Prevents meiosis resumption in prophase-arrested oocytes via CDC25B inactivation by phosphorylation (By similarity). May also regulate rapid eye movement (REM) sleep in the pedunculopontine tegmental (PPT) (By similarity). Phosphorylates APOBEC3G and AICDA (PubMed:<a href="http://www.uniprot.org/citations/16387847" target="\_blank">16387847</a>, PubMed:<a href="http://www.uniprot.org/citations/18836454" target="\_blank">18836454</a>). Phosphorylates HSF1; this phosphorylation promotes HSF1 nuclear localization and transcriptional activity upon heat shock (PubMed:<a href="http://www.uniprot.org/citations/21085490" target="\_blank">21085490</a>). Acts as a negative regulator of mTORC1 by mediating phosphorylation of RPTOR (PubMed:<a href="http://www.uniprot.org/citations/31112131" target=" blank">31112131</a>/a>).

#### **Cellular Location**

Cytoplasm. Cell membrane. Membrane; Lipid-anchor. Nucleus. Mitochondrion {ECO:0000250|UniProtKB:P05132}. Note=Translocates into the nucleus (monomeric catalytic subunit). The inactive holoenzyme is found in the cytoplasm. Distributed throughout the cytoplasm in meiotically incompetent oocytes. Associated to mitochondrion as meiotic competence is acquired. Aggregates around the germinal vesicles (GV) at the immature GV stage oocytes (By similarity). Colocalizes with HSF1 in nuclear stress bodies (nSBs) upon heat shock (PubMed:21085490) Recruited to the cell membrane through interaction with SMO (By similarity). {ECO:0000250|UniProtKB:P05132, ECO:0000269|PubMed:21085490}

#### **Tissue Location**

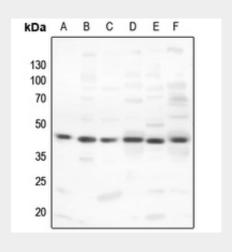

Isoform 1 is ubiquitous. Isoform 2 is sperm- specific and is enriched in pachytene spermatocytes but is not detected in round spermatids.

## Anti-PKA C alpha/beta Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

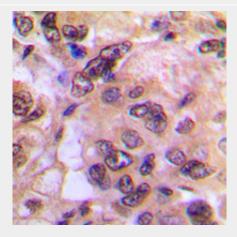

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

## Anti-PKA C alpha/beta Antibody - Images

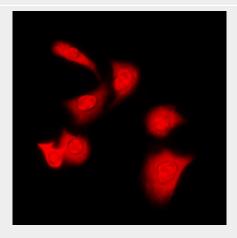

Western blot analysis of PKA C alpha/beta expression in HEK293T (A), Hela (B), H446 (C), mouse brain (D), mouse testis (E), rat testis (F) whole cell lysates.

Immunohistochemical analysis of PKA C alpha/beta staining in human breast cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of PKA C alpha/beta staining in Raw264.7 cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with a DyLight 594-conjugated secondary antibody (red) in PBS at room temperature in the dark.

## Anti-PKA C alpha/beta Antibody - Background

Rabbit polyclonal antibody to PKA C alpha/beta
