STK31 Antibody (N-term) - Images

The anti-STK31 Pab (Cat. #AP7242a) is used in Western blot to detect STK31 in rat testis tissue lysate.

STK31 Antibody (F47) (Cat. #AP7242a) western blot analysis in A2058 cell line lysates

(35ug/lane). This demonstrates the STK31 antibody detected the STK31 protein (arrow).

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.

STK31 Antibody (N-term) - Background

This gene is similar to a mouse gene that encodes a putative protein kinase with a tudor domain, and shows testis-specific expression. Alternative splicing results in multiple transcript variants encoding different isoforms.
