

MCAD Polyclonal Antibody
Catalog # AP73207**Specification**

MCAD Polyclonal Antibody - Product Information

Application	WB
Primary Accession	P11310
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal

MCAD Polyclonal Antibody - Additional Information**Gene ID** 34**Other Names**

ACADM; Medium-chain specific acyl-CoA dehydrogenase, mitochondrial; MCAD

Dilution

WB~~Western Blot: 1/500 - 1/2000. ELISA: 1/20000. Not yet tested in other applications.

Format

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

Storage Conditions

-20°C

MCAD Polyclonal Antibody - Protein Information**Name** ACADM ([HGNC:89](#))**Function**

Medium-chain specific acyl-CoA dehydrogenase is one of the acyl-CoA dehydrogenases that catalyze the first step of mitochondrial fatty acid beta-oxidation, an aerobic process breaking down fatty acids into acetyl-CoA and allowing the production of energy from fats (PubMed:1970566, PubMed:21237683, PubMed:2251268, PubMed:8823175). The first step of fatty acid beta-oxidation consists in the removal of one hydrogen from C-2 and C-3 of the straight-chain fatty acyl-CoA thioester, resulting in the formation of trans-2-enoyl-CoA (PubMed:2251268). Electron transfer flavoprotein (ETF) is the electron acceptor that transfers electrons to the main mitochondrial respiratory chain via ETF-ubiquinone oxidoreductase (ETF dehydrogenase) (PubMed:15159392, PubMed:25416781). Among the different mitochondrial acyl-CoA dehydrogenases, medium-chain specific acyl-CoA dehydrogenase acts specifically on acyl-CoAs with saturated 6 to 12 carbons long primary chains

(PubMed:1970566,
PubMed:21237683,
PubMed:2251268,
PubMed:8823175).

Cellular Location

Mitochondrion matrix

MCAD Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

MCAD Polyclonal Antibody - Images

MCAD Polyclonal Antibody - Background

Acyl-CoA dehydrogenase specific for acyl chain lengths of 4 to 16 that catalyzes the initial step of fatty acid beta- oxidation. Utilizes the electron transfer flavoprotein (ETF) as an electron acceptor to transfer electrons to the main mitochondrial respiratory chain via ETF-ubiquinone oxidoreductase (ETF dehydrogenase).
