Target/Specificity

This CALM1 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 107-132 amino acids from the C-terminal region of human CALM1.

Dilution

WB~~1:1000
IF~~1:10~50
IHC-P~~1:50~100
FC~~1:10~50
E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

CALM1 Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic

procedures.

CALM1 Antibody (C-term) - Protein Information

Name CALM1 {ECO:0000303|PubMed:7925473, ECO:0000312|HGNC:HGNC:1442}

Function Calmodulin acts as part of a calcium signal transduction pathway by mediating the control of a large number of enzymes, ion channels, aquaporins and other proteins through calcium-binding (PubMed:[16760425](#), PubMed:[23893133](#), PubMed:[26969752](#), PubMed:[27165696](#), PubMed:[28890335](#), PubMed:[31454269](#), PubMed:[35568036](#)). Calcium-binding is required for the activation of calmodulin (PubMed:[16760425](#), PubMed:[23893133](#), PubMed:[26969752](#), PubMed:[27165696](#), PubMed:[28890335](#), PubMed:[31454269](#), PubMed:[35568036](#)). Among the enzymes to be stimulated by the calmodulin-calcium complex are a number of protein kinases, such as myosin light-chain kinases and calmodulin-dependent protein kinase type II (CaMK2), and phosphatases (PubMed:[16760425](#), PubMed:[23893133](#), PubMed:[26969752](#), PubMed:[27165696](#), PubMed:[28890335](#), PubMed:[31454269](#), PubMed:[35568036](#)). Together with CCP110 and centrin, is involved in a genetic pathway that regulates the centrosome cycle and progression through cytokinesis (PubMed:[16760425](#)). Is a regulator of voltage- dependent L-type calcium channels (PubMed:[31454269](#)). Mediates calcium- dependent inactivation of CACNA1C (PubMed:[26969752](#)). Positively regulates calcium-activated potassium channel activity of KCNN2 (PubMed:[27165696](#)). Forms a potassium channel complex with KCNQ1 and regulates electrophysiological activity of the channel via calcium- binding (PubMed:[25441029](#)). Acts as a sensor to modulate the endoplasmic reticulum contacts with other organelles mediated by VMP1:ATP2A2 (PubMed:[28890335](#)).

Cellular Location

Cytoplasm, cytoskeleton, spindle. Cytoplasm, cytoskeleton, spindle pole. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Cell projection, cilium, flagellum {ECO:0000250|UniProtKB:P0DP26} Note=Distributed throughout the cell during interphase, but during mitosis becomes dramatically localized to the spindle poles and the spindle microtubules

CALM1 Antibody (C-term) - Background

CALM1 is a member of the EF-hand calcium-binding protein family. Calmodulin mediates the control of a large number of enzymes and other proteins by Ca^{2+} . Among the enzymes to be stimulated by the calmodulin- Ca^{2+} complex are a number of protein kinases and phosphatases. Together with CEP110 and centrin, is involved in a genetic pathway that regulates the centrosome cycle and progression through cytokinesis.
