

CTCF Antibody

Rabbit mAb Catalog # AP91155

Specification

CTCF Antibody - Product Information

Application WB, IHC, FC, ICC

Primary Accession P49711
Reactivity Rat

Clonality Monoclonal

Other Names

Ctcf; CTCFL paralog; MRD21;

Isotype Rabbit IgG
Host Rabbit
Calculated MW 82785 Da

CTCF Antibody - Additional Information

Dilution WB~~1:1000

IHC~~1:100~500 FC~~1:10~50 ICC~~N/A

Purification Affinity-chromatography

Immunogen A synthesized peptide derived from human

CTCF

Description Plays a important role in chromatin

remodeling. Can dimerize when it is bound to different DNA sequences, mediating long-range chromatin looping. Mediates interchromosomal association between IGF2/H19 and WSB1/NF1 and may direct distant DNA segments to a common

transcription factory.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline,

pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid

freeze / thaw cycle.

CTCF Antibody - Protein Information

Name CTCF

Function

Chromatin binding factor that binds to DNA sequence specific sites and regulates the 3D structure of chromatin (PubMed:18347100, PubMed:18654629, PubMed:<a href="http://www.uniprot.org/citations/19322193"

```
target=" blank">19322193</a>). Binds together strands of DNA, thus forming chromatin loops,
and anchors DNA to cellular structures, such as the nuclear lamina (PubMed: <a
href="http://www.uniprot.org/citations/18347100" target=" blank">18347100</a>, PubMed:<a
href="http://www.uniprot.org/citations/18654629" target="_blank">18654629</a>, PubMed:<a
href="http://www.uniprot.org/citations/19322193" target="blank">19322193</a>). Defines the
boundaries between active and heterochromatic DNA via binding to chromatin insulators, thereby
preventing interaction between promoter and nearby enhancers and silencers (PubMed: <a
href="http://www.uniprot.org/citations/18347100" target=" blank">18347100</a>, PubMed:<a
href="http://www.uniprot.org/citations/18654629" target="blank">18654629</a>, PubMed:<a
href="http://www.uniprot.org/citations/19322193" target="_blank">19322193</a>). Plays a
critical role in the epigenetic regulation (PubMed:<a
href="http://www.uniprot.org/citations/16949368" target=" blank">16949368</a>). Participates
in the allele-specific gene expression at the imprinted IGF2/H19 gene locus (PubMed:<a
href="http://www.uniprot.org/citations/16107875" target=" blank">16107875</a>, PubMed:<a
href="http://www.uniprot.org/citations/16815976" target="blank">16815976</a>, PubMed:<a
href="http://www.uniprot.org/citations/17827499" target="blank">17827499</a>). On the
maternal allele, binding within the H19 imprinting control region (ICR) mediates maternally
inherited higher- order chromatin conformation to restrict enhancer access to IGF2 (By similarity).
Mediates interchromosomal association between IGF2/H19 and WSB1/NF1 and may direct distant
DNA segments to a common transcription factory (By similarity). Regulates asynchronous
replication of IGF2/H19 (By similarity). Plays a critical role in gene silencing over considerable
distances in the genome (By similarity). Preferentially interacts with unmethylated DNA,
preventing spreading of CpG methylation and maintaining methylation-free zones (PubMed: <a
href="http://www.uniprot.org/citations/18413740" target=" blank">18413740</a>). Inversely,
binding to target sites is prevented by CpG methylation (PubMed:<a
href="http://www.uniprot.org/citations/18413740" target=" blank">18413740</a>). Plays an
important role in chromatin remodeling (PubMed:<a
href="http://www.uniprot.org/citations/18413740" target=" blank">18413740</a>). Can dimerize
when it is bound to different DNA sequences, mediating long-range chromatin looping (PubMed: <a
href="http://www.uniprot.org/citations/12191639" target=" blank">12191639</a>). Causes local
loss of histone acetylation and gain of histone methylation in the beta-globin locus, without
affecting transcription (PubMed: <a href="http://www.uniprot.org/citations/12191639"
target=" blank">12191639</a>). When bound to chromatin, it provides an anchor point for
nucleosomes positioning (PubMed:<a href="http://www.uniprot.org/citations/12191639"
target=" blank">12191639</a>). Seems to be essential for homologous X-chromosome pairing
(By similarity). May participate with Tsix in establishing a regulatable epigenetic switch for X
chromosome inactivation (PubMed: <a href="http://www.uniprot.org/citations/11743158"
target=" blank">11743158</a>). May play a role in preventing the propagation of stable
methylation at the escape genes from X-inactivation (PubMed: <a
href="http://www.uniprot.org/citations/11743158" target="_blank">11743158</a>). Involved in
sister chromatid cohesion (PubMed:<a href="http://www.uniprot.org/citations/12191639"
target=" blank">12191639</a>). Associates with both centromeres and chromosomal arms
during metaphase and required for cohesin localization to CTCF sites (PubMed: <a
href="http://www.uniprot.org/citations/18550811" target=" blank">18550811</a>). Plays a role
in the recruitment of CENPE to the pericentromeric/centromeric regions of the chromosome during
mitosis (PubMed:<a href="http://www.uniprot.org/citations/26321640"
target=" blank">26321640</a>). Acts as a transcriptional repressor binding to promoters of
vertebrate MYC gene and BAG1 gene (PubMed:<a
href="http://www.uniprot.org/citations/18413740" target=" blank">18413740</a>, PubMed:<a
href="http://www.uniprot.org/citations/8649389" target=" blank">8649389</a>, PubMed:<a
href="http://www.uniprot.org/citations/9591631" target="_blank">9591631</a>). Also binds to
the PLK and PIM1 promoters (PubMed:<a href="http://www.uniprot.org/citations/12191639"
target=" blank">12191639</a>). Acts as a transcriptional activator of APP (PubMed:<a
href="http://www.uniprot.org/citations/9407128" target=" blank">9407128</a>). Regulates
APOA1/C3/A4/A5 gene cluster and controls MHC class II gene expression (PubMed: <a
href="http://www.uniprot.org/citations/18347100" target=" blank">18347100</a>, PubMed:<a
href="http://www.uniprot.org/citations/19322193" target="blank">19322193</a>). Plays an
```

Tel: 858.875.1900 Fax: 858.875.1999

essential role in oocyte and preimplantation embryo development by activating or repressing transcription (By similarity). Seems to act as tumor suppressor (PubMed:12191639).

Cellular Location

Nucleus, nucleoplasm. Chromosome. Chromosome, centromere. Note=May translocate to the nucleolus upon cell differentiation. Associates with both centromeres and chromosomal arms during metaphase. Associates with the H19 ICR in mitotic chromosomes. May be preferentially excluded from heterochromatin during interphase

Tissue Location

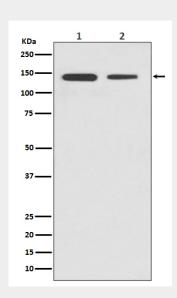

Ubiquitous. Absent in primary spermatocytes.

CTCF Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

CTCF Antibody - Images

Western blot analysis of CTCF expression in (1) HeLa cell lysate; (2) Mouse brain lysate.
