This enzyme is a thiol protease that recognizes and hydrolyzes a peptide bond at the C-terminal glycine of ubiquitin (PubMed:[9774100](#), PubMed:[8639624](#), PubMed:[12408865](#), PubMed:[23359680](#)). Also binds to free monoubiquitin and may prevent its degradation in lysosomes (By similarity). The homodimer may have ATP-independent ubiquitin ligase activity (PubMed:[12408865](#)).****Cellular Location****Cytoplasm. Endoplasmic reticulum**

Tissue Location

membrane; Lipid- anchor. Note=About 30% of total UCHL1 is associated with membranes in brain
Found in neuronal cell bodies and processes throughout the neocortex (at protein level). Expressed in neurons and cells of the diffuse neuroendocrine system and their tumors. Weakly expressed in ovary. Down-regulated in brains from Parkinson disease and Alzheimer disease patients.
