

**DC-SIGN Antibody**  
**Catalog # ASC10125****Specification**

---

**DC-SIGN Antibody - Product Information**

Application	WB, IHC-P, E
Primary Accession	<a href="#">Q9NNX6</a>
Other Accession	<a href="#">Q9NNX6</a> , <a href="#">46396012</a>
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	Predicted: 44 kDa

Application Notes	Observed: 47 kDa KDa DC-SIGN antibody can be used for detection of DC-SIGN by Western blot at 2 µg/mL. Antibody can also be used for immunohistochemistry starting at 10 µg/mL.
-------------------	--

**DC-SIGN Antibody - Additional Information**

Gene ID **30835**

**Other Names**

DC-SIGN Antibody: CDSIGN, CLEC4L, DC-SIGN, DC-SIGN1, CD209 antigen, C-type lectin domain family 4 member L, CD209 molecule

**Target/Specificity**

CD209;

**Reconstitution & Storage**

DC-SIGN antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

DC-SIGN Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**DC-SIGN Antibody - Protein Information**

**Name** CD209

**Synonyms** CLEC4L

**Function**

Pathogen-recognition receptor expressed on the surface of immature dendritic cells (DCs) and involved in initiation of primary immune response. Thought to mediate the endocytosis of

pathogens which are subsequently degraded in lysosomal compartments. The receptor returns to the cell membrane surface and the pathogen-derived antigens are presented to resting T-cells via MHC class II proteins to initiate the adaptive immune response.

#### Cellular Location

[Isoform 1]: Cell membrane; Single- pass type II membrane protein [Isoform 3]: Cell membrane; Single- pass type II membrane protein [Isoform 5]: Cell membrane; Single- pass type II membrane protein [Isoform 7]: Secreted. [Isoform 9]: Secreted. [Isoform 11]: Secreted.

#### Tissue Location

Predominantly expressed in dendritic cells and in DC-residing tissues. Also found in placental macrophages, endothelial cells of placental vascular channels, peripheral blood mononuclear cells, and THP-1 monocytes.

### DC-SIGN Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### DC-SIGN Antibody - Images

Western blot analysis of DC-SIGN expression in human placenta tissue lysate in the absence (lane 1) and presence (lane 2) of blocking peptide with DC-SIGN antibody at 2 µg /ml.

Immunohistochemistry of DC-SIGN in human small intestine tissue with DC-SIGN antibody at 10  $\mu\text{g/mL}$ .

### **DC-SIGN Antibody - Background**

DC-SIGN Antibody: Dendritic cells (DCs) that control immune responses were recently found to capture and transport HIV from the mucosal area to remote lymph nodes, where DCs hand over HIV to CD4+ T lymphocytes. DCs also amplify the amount of virus and extend the duration of viral infectivity. Multiple strains of HIV-1, HIV-2 and SIV bind to DCs via DC-SIGN. ICAM-3 is the natural ligand for DC-SIGN. A DC-SIGN homologue (termed DC-SIGNR, L-SIGN, and DC-SIGN2) was identified recently. DC-SIGN forms a novel gene family with DC-SIGNR and many alternatively spliced isoforms of DC-SIGN and DC-SIGNR. The expression of DC-SIGN was found in mucosal tissues including placenta, small intestine, and rectum.
