# BAPX1 Antibody
**Catalog # ASC11288**

## Specification

### BAPX1 Antibody - Product Information

| | |
|---|---|
| Application | **WB, IHC-P, IF, E** |
| Primary Accession | P78367 |
| Other Accession | NP_001180, 4502365 |
| Reactivity | **Human, Mouse, Rat** |
| Host | **Rabbit** |
| Clonality | **Polyclonal** |
| Isotype | **IgG** |
| Application Notes | **BAPX1 antibody can be used for detection of BAPX1 by Western blot at 1 and 2 µg/mL. Antibody can also be used for immunohistochemistry starting at 5 µg/mL. For immunofluorescence start at 20 µg/mL.** |

### BAPX1 Antibody - Additional Information

Gene ID **579**

**Target/Specificity**
NKX3-2; BAPX1 antibody is predicted not to cross-react with other NKX homeobox proteins.

**Reconstitution & Storage**
Antibody can be stored at 4°C up to one year. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**
BAPX1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

### BAPX1 Antibody - Protein Information

**Name** NKX3-2

**Synonyms** BAPX1, NKX3B

**Function**
Transcriptional repressor that acts as a negative regulator of chondrocyte maturation. PLays a role in distal stomach development; required for proper antral-pyloric morphogenesis and development of antral-type epithelium. In concert with GSC, defines the structural components of the middle ear; required for tympanic ring and gonium development and in the regulation of the width of the malleus (By similarity).

**Cellular Location**
Nucleus.

**Tissue Location**

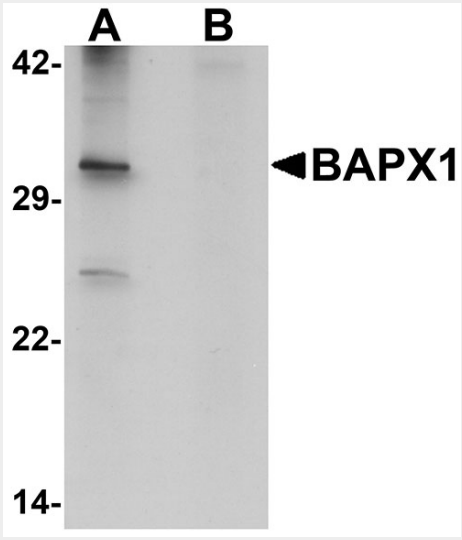
Expressed at highest levels in cartilage, bone (osteosarcoma) and gut (small intestine and colon), whereas moderate expression is seen in trachea and brain. Expressed in visceral mesoderm and embryonic skeleton.

## BAPX1 Antibody - Protocols

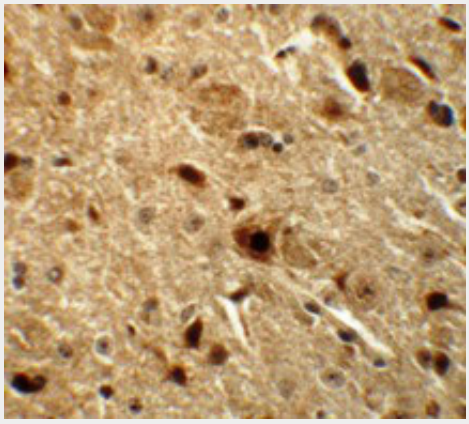
Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

## BAPX1 Antibody - Images



Western blot analysis of BAPX1 in human brain tissue lysate with BAPX1 antibody at 1 µg/mL in (A) the absence and (B) the presence of blocking peptide.



Immunohistochemistry of BAPX1 in mouse brain tissue with BAPX1 antibody at 5 µg/mL.

Immunofluorescence of BAPX1 in mouse brain tissue with BAPX1 antibody at 20 µg/mL.

**BAPX1 Antibody - Background**

BAPX1 Antibody: BAPX1 is the mammalian homolog of the Drosophila bagpipe homeobox gene and is expressed in the splanchnic mesoderm and embryonic skeleton. It is one of the earliest developmental markers for the sclerotome portion of the somite and the gut mesentery. BAPX1 is required for normal skeletal development; homozygous inactivating mutations in the BAPX1 gene result in spodylo-megaepiphyseal-metaphyseal dysplasia (SMMD). It has also been suggested to play a role in the proper development of the mammalian gut and is required for distal stomach development as part of a BARX1-dependent pathway.
