

AFAP1 Antibody
Catalog # ASC11397**Specification**

AFAP1 Antibody - Product Information

| | |
|-------------------|---|
| Application | WB, E |
| Primary Accession | Q8N556 |
| Other Accession | NP_940997 , 197382472 |
| Reactivity | Human, Mouse |
| Host | Rabbit |
| Clonality | Polyclonal |
| Isotype | IgG |
| Application Notes | AFAP1 antibody can be used for detection of AFAP1 by Western blot at 1 - 2 µg/mL. |

AFAP1 Antibody - Additional InformationGene ID **60312****Target/Specificity**

AFAP1; Monomer and homomultimer of AFAP1 are known to exist; AFAP1 antibody is predicted to not cross-react with other AFAP family members.

Reconstitution & Storage

AFAP1 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

AFAP1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

AFAP1 Antibody - Protein Information**Name** AFAP1**Synonyms** AFAP**Function**

Can cross-link actin filaments into both network and bundle structures (By similarity). May modulate changes in actin filament integrity and induce lamellipodia formation. May function as an adapter molecule that links other proteins, such as SRC and PKC to the actin cytoskeleton. Seems to play a role in the development and progression of prostate adenocarcinoma by regulating cell-matrix adhesions and migration in the cancer cells.

Cellular Location

Cytoplasm, cytoskeleton, stress fiber

Tissue Location

Low expression in normal breast epithelial cell line MCF-10A and in tumorigenic breast cancer cell

lines MCF-7, T-47D and ZR-75-1. Highly expressed in the invasive breast cancer cell lines MDA-MB-231 and MDA-MB-435. Overexpressed in prostate carcinoma

AFAP1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

AFAP1 Antibody - Images

Western blot analysis of AFAP1 in HeLa cell lysate with AFAP1 antibody at (A) 1 and (B) 2 µg/mL.

AFAP1 Antibody - Background

AFAP1 Antibody: The actin filament-associated protein AFAP1 (AFAP-110) is an actin cross-linking protein first identified as a substrate of the viral oncogene v-Src. AFAP1 has a fundamental role in actin cytoskeleton arrangement. It contains a carboxyterminal actin-binding domain that directly binds to F-actin and serves as an adaptor protein in the regulation of SRC and PKC signal transduction by several functional domains, including 2 pleckstrin homology (PH) domains, a Src homology 3-binding (SH3-binding) motif, and several SH2-binding motifs. It is overexpressed in prostate carcinoma and contributes to tumor growth by regulating cell-matrix adhesions and migration in the cancer cells. AFAP1 represent a possible therapeutic target for controlling tumorigenesis and metastasis.
