HIST1H2AG Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

HIST1H2AG Antibody (Center) - Protein Information

Name H2AC11 (HGNC:4737)

Synonyms H2AFP, HIST1H2AG

Function
Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.

Cellular Location
Nucleus. Chromosome.
