

MPDU1 Antibody (Center) Blocking Peptide

Synthetic peptide
Catalog # BP2408a

Specification

MPDU1 Antibody (Center) Blocking Peptide - Product Information

Primary Accession [O75352](#)
Other Accession [MPU1_HUMAN](#)

MPDU1 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 9526

Other Names

Mannose-P-dolichol utilization defect 1 protein, Suppressor of Lec15 and Lec35 glycosylation mutation homolog, SL15, MPDU1

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP2408a](/product/products/AP2408a) was selected from the Center region of human MPDU1 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MPDU1 Antibody (Center) Blocking Peptide - Protein Information

Name MPDU1

Function

Required for normal utilization of mannose-dolichol phosphate (Dol-P-Man) in the synthesis of N-linked and O-linked oligosaccharides and GPI anchors.

Cellular Location

Membrane; Multi-pass membrane protein

MPDU1 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MPDU1 Antibody (Center) Blocking Peptide - Background

Glycosylation is one of the most universal but at the same time complex protein modifications. Modification with sugar moieties can be both co- translational and post- translational, occurring in the endoplasmatic reticulum and golgi. Three different forms of glycosylation can be distinguished: N-linked oligosaccharides, O-linked oligosaccharides and glycosyl- phosphatidylinositol (GPI-) anchors. Glycosylation results in thousands of distinct, bioactive glycoproteins resident throughout the cell that strongly determine protein-protein, carbohydrate-protein, membrane, and adhesion properties. Diseases associated with glycosylation defects include Congenital disorders of glycosylation, (CDG), also known as carbohydrate deficient glycoprotein syndromes, and diseases associated with advanced aging.
